

# Blockchain and privacy in GDPR era

Damian Klimas

Uniwersytet  
Wrocławski

**Friend: So what is BITCOIN?**

**Me: Bitcoin is a digital payment network backed by blockchain technology that....**

**Friend: Wait... what is blockchain?**

**Me:**

@Finance\_god

**YOU'VE NEVER HEARD OF**

**BLOCKCHAIN?!?!**

# HOW DOES BLOCKCHAIN WORK?

One party requests a transaction.

Requested transactions are funneled into a P2P network and broadcast to each individual computer (or node).

Individual nodes receive the request and validate the transaction using an algorithm.

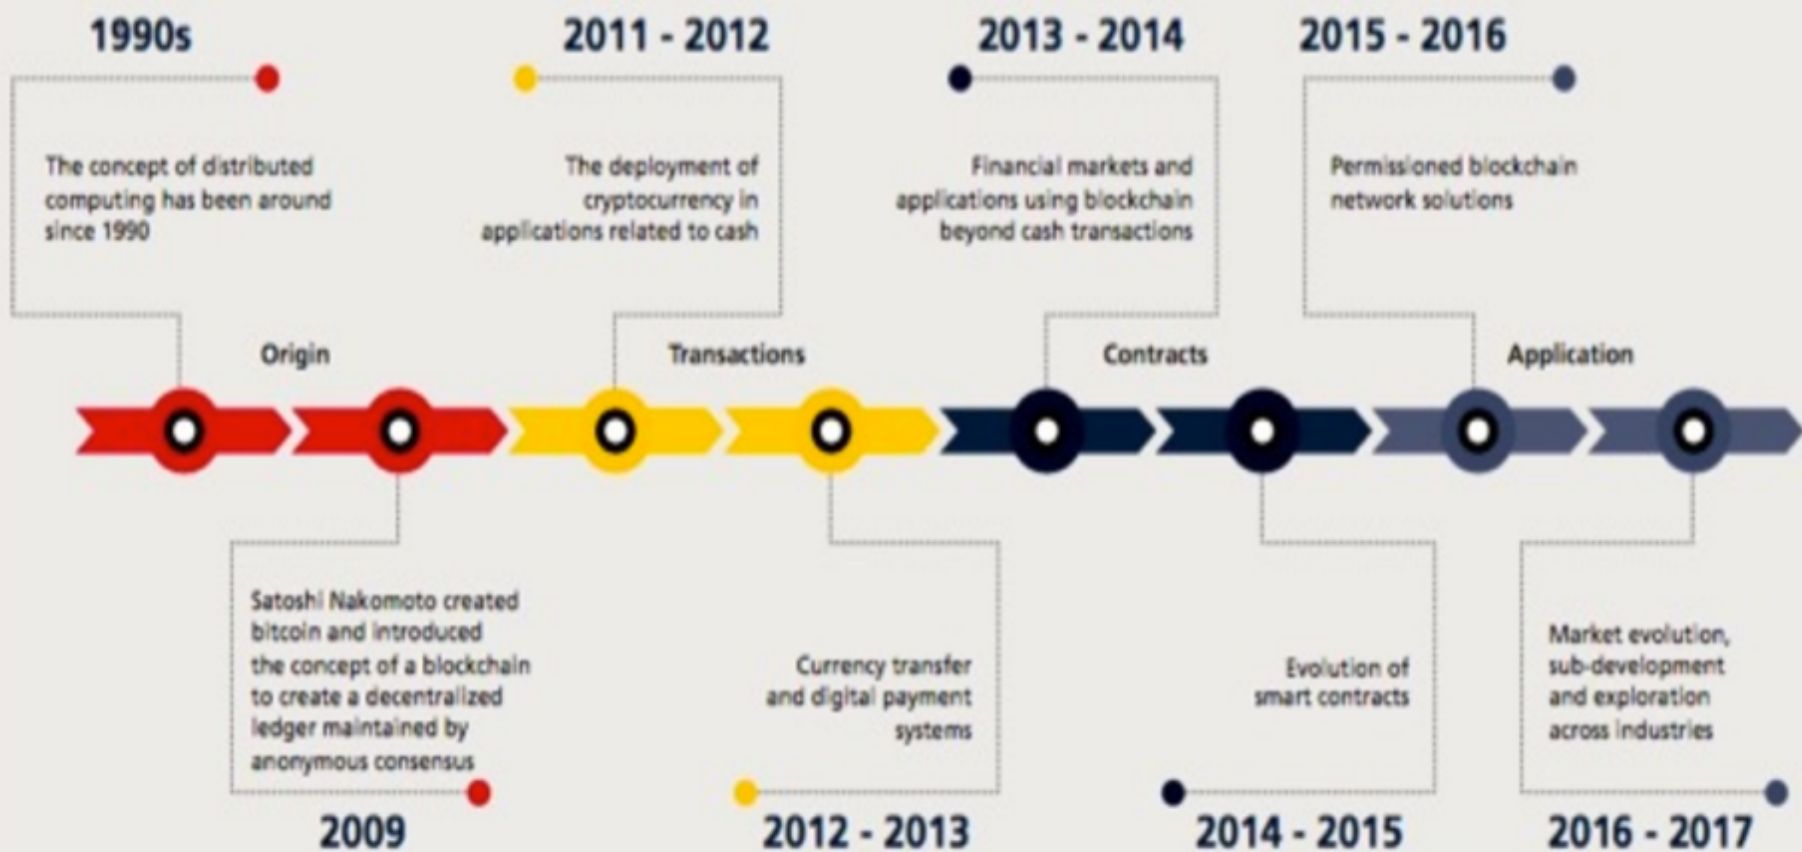

Once the block is added to an existing chain, transactions are complete and permanent.

Approved transactions are represented as blocks and added to a public ledger.

# BLOCKCHAIN HISTORY

# GDPR history

# Distributed and centralised systems

# Distributed system

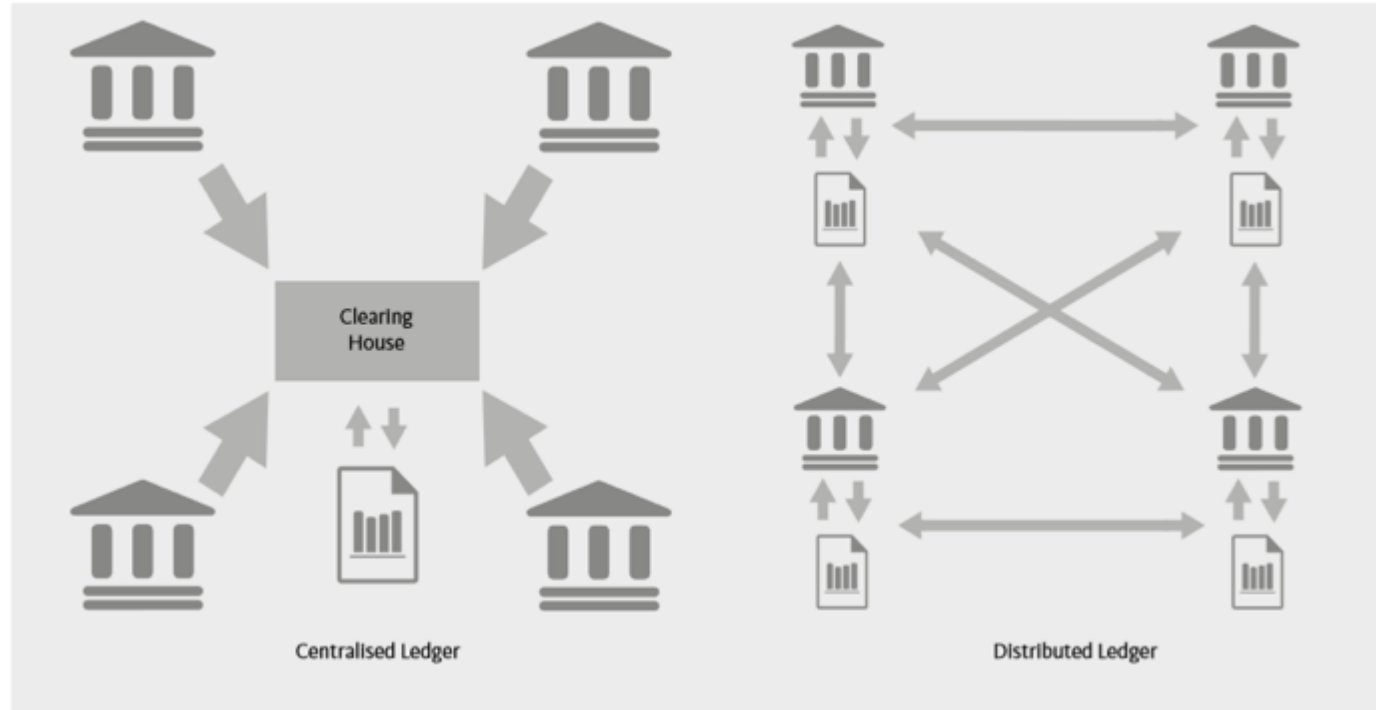

# Centralised and decentralised ledger

## CENTRALISED

- „trusted third party”
- “overwriting” data (records)
- Conventional data bases, where rules are applied to all data base from central app/other central source

## DECENTRALISED

- created by all users
- updated with each transaction
- rules for transactions that are related to it

# 3 concepts of GDPR scope in regard to blockchain

1. GDPR is not applicable to blockchain
2. GDPR is partially applicable
3. GDPR is fully applicable

**Program „Od papierowej do cyfrowej Polski”**

# BLOCKCHAIN

**Solutions for a responsible use of the blockchain in the  
context of personal data**

**6th of November 2018**

# Blockchain and personal data

# Status of user/participant

# Joint controlling in blockchain

## *Article 26*

### **Joint controllers**

1. Where two or more controllers **jointly determine the purposes and means of processing**, they shall be joint controllers. They shall in a transparent manner determine their respective responsibilities for compliance with the obligations under this Regulation, in particular as regards the exercising of the rights of the data subject and their respective duties to provide the information referred to in Articles 13 and 14, by means of an arrangement between them unless, and in so far as, the respective responsibilities of the controllers are determined by Union or Member State law to which the controllers are subject. The arrangement may designate a contact point for data subjects.

# Public key/address/identifier

Are they personal data?

**Examples:**

1MAVwzZQx6HVMH3rna9h6vtUueo7wZ3Qr9

# Status of miner

# Data retention

„The data minimisation principle requires that the data collected be **relevant** and limited to what is strictly necessary in view of the purposes for which they are processed.”

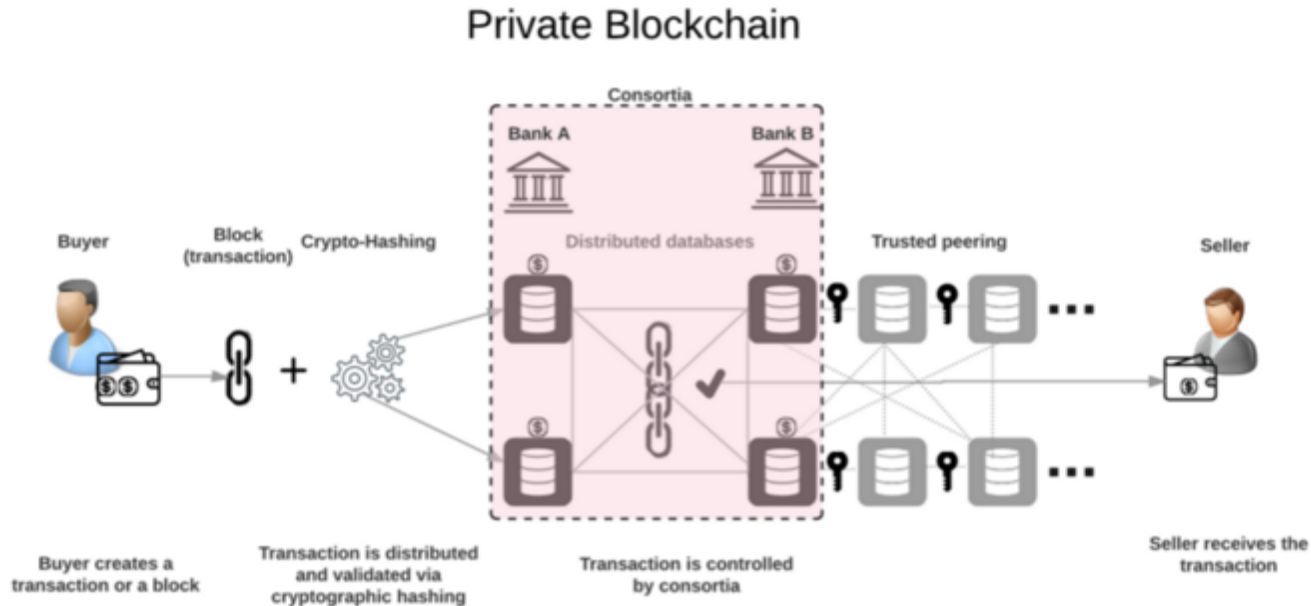

Blockchain and the GDPR: Solutions for a responsible use of the blockchain in the context of personal data, CNIL,  
06 November 2018

# What about this?

# Private blockchain and personal data

# Decentralised open and permissioned ledgers

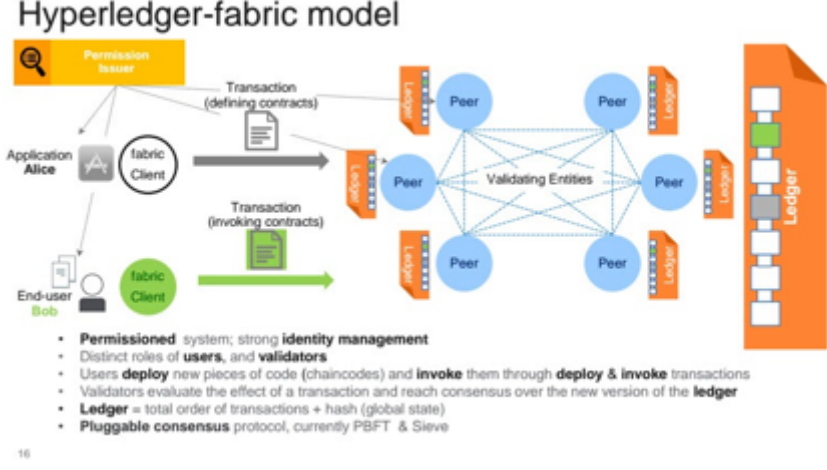

## OPEN (PUBLIC)

- EVERYONE CAN JOIN
- SOMETIMES ONE SHOULD MEET CERTAIN REQUIREMENTS (SOFTWARE INSTAL)

## CLOSED (PERMISSIONED)

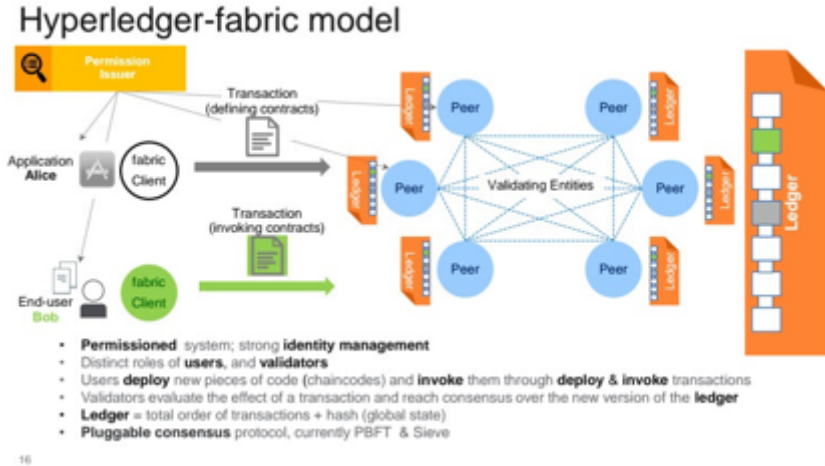

- JOIN UPON ACCEPTANCE/INVITATION
- CLOSED LEDGER
- CONTROLLED BY "THIRD PARTY/OWNER"

- **Permissioned** system; strong **identity management**
- Distinct roles of **users**, and **validators**
- Users **deploy** new pieces of code (chaincodes) and **invoke** them through **deploy & invoke** transactions
- Validators evaluate the effect of a transaction and reach consensus over the new version of the **ledger**
- **Ledger** = total order of transactions + hash (global state)
- **Pluggable consensus** protocol, currently PBFT & Sieve

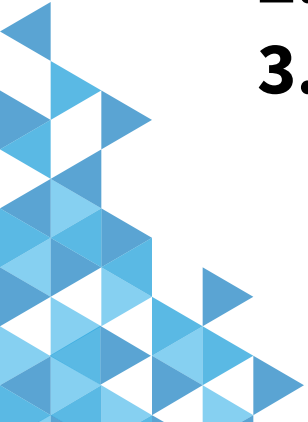

- EVERYONE CAN JOIN
- SOMETIMES ONE SHOULD MEET CERTAIN REQUIREMENTS (SOFTWARE INSTAL)

- EVERYONE CAN JOIN
- SOMETIMES ONE SHOULD MEET CERTAIN REQUIREMENTS (SOFTWARE INSTAL)

# GDPR rights that are entirely compatible with a public blockchain

- 1. Right to be informed (art. 12-14)**
  - 2. Right of access (art. 15)**
  - 3. Right to portability\* (art. 20)**
- 

# GDPR rights that are not (entirely) compatible with a public blockchain

- 1. The right to rectification (art. 16)**
- 2. The right to erasure (art. 17)**
- 3. The right to restrict processing (art. 18)**
- 4. Rights in relation to automated decision making and profiling (art. 22) – „*right to obtain human intervention*”**

# Examples of blockchain implementations, where personal data are crucial

## A Pioneer in Real Estate Blockchain Emerges in Europe

Wall Street Journal - 6 mar 2018

The **blockchain** technology that underpins cryptocurrencies such as **bitcoin** could change the way property deals are done and recorded more than any other new technology, **real-estate** and technology experts say. And Sweden's nearly 400-year-old land mapping and registration authority is likely to ...
